Deadline : 8/12/2021

Time : 6 hours

TASK

Create a laravel project and name it (test_icebergdevelopers).This project works like an inventory management system. Make a registration and login page for Admin. Only one admin can register and login. After login there will be 2 modules Dashboard and Inventory. In Dashboard there will be 3 cards which will shows that how many items are remaining in the store, how much items cost , and quantity of all items like if we have 2 items with 3,3 quantity so it will be 6 total. In Inventory module there will be all crud operations add update delete and view. In registration and login use simple laravel without jquery ajax. And in dashboard and inventory module use only jquery ajax to get and post data. Use yajra datatables in Inventory controller to send data to Inventory view and use jquery datatables to show data.

Good Luck
